

Publishing Policy

All submitted articles are peer-reviewed and upon acceptance are published in English on the **MIR journal** website in open access format – free of charge for the readers.

Policy for submitted paper version: open access is not allowed.

Policy for accepted paper version: open access is not allowed.

Policy for published paper version: open access is allowed. The published paper version can be deposited in: Institutional Repository, PubMed, Pre-Print Server, Author's Personal Website or any other Open Access repositories. There is no embargo for the publication of the published paper version.

Authorship

Authorship determination should be based on the following:

1. Significant participation in experiment planning and design, performance of laboratory and other experiments, analysis and discussion of results.
2. Writing of the manuscript or critically discussing its content, especially experimental results and conclusions.
3. Approval of the final version of the paper for publication.
4. Accountability for the integrity and the accuracy of all the data and conclusions presented in the publication.

Authors of the publication should meet all four requirements.

The corresponding author should be able to explain the contribution of every author of the paper.

All the individuals who contributed to the research project or preparation of the manuscript for publication but are not qualified as the authors of the publication, should be mentioned in the section “Acknowledgements”. For example there should be a list of contributors that provided only technical help, assisted in writing the paper or provided general support like the department chairperson.

It is mandatory to disclose all potential conflicts of interest for all authors of the publication as well as for all peer reviewers and editors. It is also required that all editors and peer reviewers declare all possible competing

interests. If it is established that competing interests exist, editors and peer reviewers are removed from the reviewing process.

All the authors of the paper that is submitted for publication should disclose all possible conflict of interests if they or immediate members of their families have any financial or commercial interests in this publication or declare their absence in the “Conflict of interests” section of the manuscript.

The author or authors submitting the manuscript describing the project funded by the organization that has financial or proprietary interests in the results of this study should be aware of all the data collected in the course of this study and have complete responsibility for the integrity and accuracy of all the data as well as for the decision to publish these results.

The authors should list all the sources of project funding including publication itself. The role of the sponsor/sponsors in all the phases of the project from experimental design to publication submission should also be disclosed by the authors.

Portability of peer review

Doctrine LLC adopted an efficient peer review process for all the papers submitted for publication. If the manuscript containing important and relevant scientific data does not meet the quality standards of the journal, the authors are encouraged to rewrite or edit the paper and submit it for the publication once more.

Plagiarism.

All the papers submitted for the publication to *Doctrine LLC* are checked for plagiarism using iThenticate software. All authors are encouraged to screen their manuscripts for plagiarism using the corresponding software before submitting it for publication.

Doctrine LLC does not publish manuscripts that contain data or parts of the author’s thesis or dissertation in the case if this thesis or dissertation has been deposited to any publicly accessible website or has been made otherwise accessible through the public domain even if it was subsequently made unavailable for the public access.

The authors submitting the original research manuscripts to *Doctrine LLC* are encouraged to include the statement on availability of additional data

from their research project, whether published or unpublished, including links and references to datasets (especially if these datasets have original DOI) as well as information about data sharing.

Drug nomenclature

According to *Doctrine LLC* rules authors should use the generic (nonproprietary) name of drug in the manuscript together with chemical formula. In the case that the drug does not have the generic name, the chemical name of the drug together with the chemical formula should be used. If the use of both generic name and chemical name of the drug is impossible, the authors should use the trade name and all drug's active ingredients should be listed in the text right after it is first mentioned.

Reporting guidance

In order to ensure that enough information is provided for editors, peer-reviewers and readers to understand the described experiments and to determine the reliability of the results, the *Doctrine* recommends that authors use the corresponding Equator network (EQUATOR) EQUATOR research guidelines.

Scientific misconduct

It is an important policy of *Doctrine LLC* to prevent the publication of articles with plagiarism, data fabrication and/or falsifications well as with citation manipulation. If in the course of the manuscript reviewing misconduct is suspected, the editorial board will follow the Code of Conduct recommendations of the Committee on Publication Ethics (COPE) (www.publicationethics.org):

- Redundant (duplicate) publication
- Plagiarism
- Data falsification/fabrication
- Changes in authorship
- Undisclosed conflict of interest (COI)
- An ethical problem with a submitted manuscript
- A reviewer has appropriated an author's idea or data

Image manipulation.

- No specific feature within an image may be enhanced, obscured, moved, removed, or introduced.
- Adjustments of brightness, contrast, or color balance are acceptable if they are applied to the whole image and as long as they do not obscure, eliminate, or misrepresent any information present in the original.
- The grouping of images from different parts of the same gel, or from different gels, fields, or exposures must be made explicit by the arrangement of the figure (e.g., dividing lines) and in the text of the figure legend.
- If the original data cannot be produced by an author when asked to provide it, acceptance or publication of the manuscript may be revoked.

All the manuscript authors are strongly encouraged to check the proofs very carefully. Special attention should be paid to spelling of the author's name, the title of the article, text of the abstract. All Tables and Figures should be cited in the text. Any corrections or changes are not desirable after publication of the article.

Retraction

The retraction of the article by the authors or the editor is accomplished according to the COPE guidelines:

- A retraction titled "(article title) Retraction" signed by the authors and/or the Editor is published in a subsequent entry
- A link on the retraction is supplied to the original article (and vice versa)
- The original article is watermarked "Retracted"
- The original HTML version is removed
